

E-QUBY
THE ELECTRIC HOME LIFT

A GEARLESS TECHNOLOGY
WITHOUT MACHINE ROOM

e-Quby

the electric home lift

YES, SMILE.

Safety and design for a superior quality of life.

Accessibility, vertical mobility, **elimination of architectural barriers**. In short, a new and renewed **quality of life**. And more value for your building.

The made in Italy home lift.

E-Quby represents all this, the elegant home lift conceived, designed and built in **Italy**, certified in compliance with the most stringent European Directives in force.

Designed with maximum optimization of space and consumption in mind, e-Quby can be installed in private and public buildings using extremely compact compartments, while maintaining cabin spaces that are always comfortable.

In this way, minimizing the need for building works and leaving the building and the house with **more space** to be allocated to other uses.

Find out all the details on:
www.QubyHomeLift.com

e-Quby features on board the same technology as the most modern electric rope lifts

The top of technology for your home. To change it **for the better**

The e-Quby home lift is ideal for people with mobility difficulties, the elderly or people with disabilities. Thanks to the e-Quby home lift they can move freely between the floors of their home again. **Being a product built to break down architectural barriers.**

No machine rooms: there are no other spaces needed other than the shaft. Everything is contained in it apart from the control panel which, for simplicity and safety, is contained in a small cabinet located next to a landing door.

It works in 220V single phase **with consumption of a normal household appliance**, using the normal socket with only 1kW of power.

E-Quby is supplied with cabin doors included.

Whether folding or automatic, the presence of cabin doors makes the e-Quby platform completely similar to a normal lift system.

Energy efficiency: uses long-lasting, low-consumption LEDs with a **higher efficiency of up to 80%** and a lifespan 10 times that of a halogen light.

The drive systems of the e-Quby home lift ensure **excellent driving comfort and silence during the entire travel**, guaranteeing **high stopping precision** and **very low power consumption.**

Automatic descent to the floor. In the event of a blackout, the e-Quby home lift does not abandon you. **It goes down to the floor alone and lets the passengers out.**

It does not use oil but uses a technology that uses a compact and efficient motor combined with highly resistant steel cables over time.

Easy maintenance: the e-Quby home lift guarantees access to the control units in an extremely simple way.

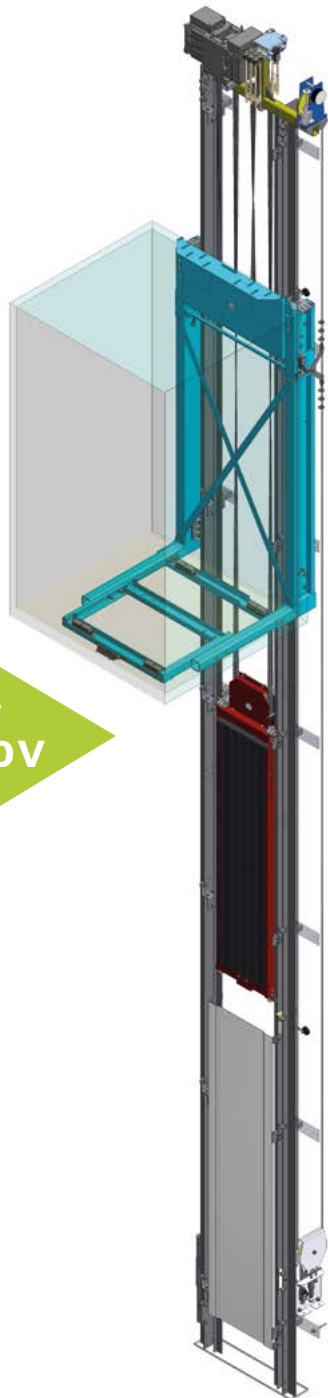

Great adaptability: with its multiple solutions, the e-Quby home lift can be installed in any type of shaft. It is possible to use it up to over **24 m of travel and 12 stops** with the possibility of single, opposite, adjacent accesses.

e-Quby technical specifications

SAFETY CERTIFIED IN COMPLIANCE WITH THE EUROPEAN MACHINERY DIRECTIVE 2006/42/EC

**1kW
220V**

TRACTION TYPE	Electric - gearless 1:1 o 2:1
★ ALIMENTAZIONE	220 / 240V monofase
SPEED	0,15 m/s
MANEUVER TYPE	Universal automatic
MAXIMUM CAPACITY	400 Kg
STANDARD PIT	150 mm
STANDARD HEAD	From 2450 mm to 2700 mm
MAXIMUM NUMBER OF ACCESSES	2
MAXIMUM NUMBER OF STOPS	8
MAXIMUM TRAVEL	24 m
CAR DOORS TYPE	<ul style="list-style-type: none">• Automatic folding doors• Automatic with horizontal movement
TYPE OF LANDING DOORS	<ul style="list-style-type: none">• Semi-automatic swing doors with 1 and 2 panels• Automatic with horizontal movement
POWER COMMITTED TO THE DIFFERENT CAPACITIES	Up to 4000kg: 1 Kw

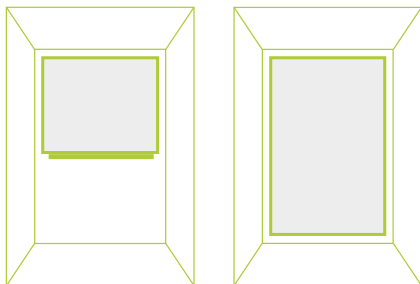

NEW!

e-Quby uses a new extremely compact motor, designed for best energy efficiency. The best of Made in Italy technology applied to elevators.

A wide range of cabins designed and produced with the simplicity of the best Italian design in

THE BASIC CONFIGURATION INCLUDES:

- LCD display in the cabin
- Wall cladding in plastic laminate
- Tubular handrail in satin stainless steel
- PVC floor
- COP panel in satin stainless steel
- Lighting with very high efficiency LED spotlights
- Optionally, it is possible to have a half-wall or full-wall mirror as standard

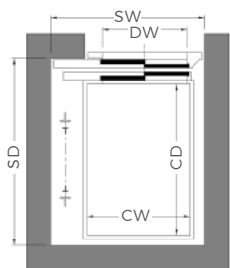

TO DISCOVER THE COMPLETE RANGE OF DOORS, COLORS AND FINISHES, CONSULT THE DEDICAT BROCHURES
